PAINÉIS RIPADOS DE MADEIRA ECOLÓGICA
PARA EXTERIORES E INTERIORES

Características

Paineis ripados compostos de madeira ecológica de segunda geração, HDPE e aditivos, certificado pelo selo FSC de responsabilidade ambiental, desenhados para aplicação em áreas externas graças à tecnologia de proteção UV, que garante a estabilidade cromática do produto durante toda a sua vida útil.

Características

Proteção UV

50% Madeira
40% PVC de alta densidade
10% Aditivos

Aplicável em todo tipo
de clima

Responsabilidade com o
meio-ambiente

Fácil instalação

Não requer manutenção

Vida útil de mais de 20 anos

Garantia de 10 anos

Certificado por FSC

Seções disponíveis

ARKOWOOD EP 12 - 25x120 mm
Metro quadrado a R\$ 678,00

ARKOWOOD EP 16 - 30x170 mm
Metro quadrado a R\$ 802,00

ARKOWOOD EP 17 - 30x170 mm
Metro quadrado a R\$ 802,00

Comprimento de régua: de 2,90m até 4,00m

INSTALAÇÃO

1 Parafuse as cantoneiras nos furos previamente realizados na superfície. Em seguida, fixe o perfil de tubo metálico nas cantoneiras instaladas para sustentação.

2 Assegurando-se das medidas, parafuse com parafuso auto brocante o primeiro perfil ripado no perfil tubo metálico já fixado na superfície de instalação.

(Não inclui elementos acessórios e mão-de-obra)

3 Repita o processo de parafusão dos demais perfis do Arkowood EP, assim formando o painel ripado na superfície desajada.

ARKOWOOD EP

INSTALAÇÃO

Caso seja necessário, utilize a cantoneira para fazer a junção nos cantos. Finalize retirando as impurezas com pano úmido.

Reforçamos que o espaçamento entre as estruturas metálicas deve ter no máximo 60cm para garantir que os ripados fiquem firmes,

(Não inclui elementos acessórios e mão-de-obra)

Utilize parafusos auto brocantes para instalar os perfis do Arkowood EP nas estruturas metálicas fixadas na superfície.

RECOMENDAÇÕES DE USO E MANUTENÇÃO

Não bata no material durante a descarga e segure-o muito bem durante o transporte, armazene o produto em paletes ou bases firmes, uniformes e rígidas, não exceda 40 unidades na vertical ao empilhar e não descanse elementos pesados sobre o produto armazenado.

Proteja-o dos elementos com materiais não translúcidos: polietileno preto, papelão ou materiais similares, garantindo fluxo contínuo de ar. Se houver contaminação, limpe imediatamente removendo qualquer substância derramada, não utilize produtos abrasivos e não esfregue, molhe-o com água quente e seque com um pano macio. Pode ser lavado à pressão, com uma recomendação de pressão máxima de 1100 PSI, sempre adote as medidas de segurança necessárias e evite danos ao material.
